

What is claimed is:

- Sub  
a1
1. An electro-luminescence display, comprising:  
an electro-luminescence panel having a display area  
and a non-display area;  
driving circuit boards for applying driving signals  
to a gate line and a data line provided at the  
electro-luminescence panel; and  
tape carrier packages connecting the driving circuit  
boards and the electro-luminescence panel in a planar state  
wherein the tape carrier packages and the driving circuit  
boards are disposed in a common plane.
2. The electro-luminescence display according to claim  
1, wherein the driving circuit boards include:  
a gate driving circuit for applying driving signals  
to the gate lines; and  
a data driving circuit for applying driving signals  
to the data lines.
3. The electro-luminescence display according to claim  
1, wherein the driving circuit boards include a plurality  
of output pads electrically connected to the tape carrier  
packages.
4. The electro-luminescence display according to claim  
3, wherein the electro-luminescence panel includes a  
plurality of input pads that are provided at the non-  
display area and electrically connected to the tape carrier  
packages.
5. The electro-luminescence display according to claim

9. The electro-luminescence display according to claim 7, wherein a substantial portion of each of said tape carrier packages having a first portion disposed in a common plane with said driving circuit boards and connected to the electro-luminescence panel.

10. The electro-luminescence display according to claim 9, wherein each of said tape carrier packages has a second portion disposed in a contiguous plane to the common plane of said electro-luminescence panel and said first portion.

RECEIVED
